When a patient presents with significant trauma, C-spine or a small mouth opening, you’ll want a familiar tool that works just as well in those difficult airways as it does in a routine intubation.

- Navigate the ET tube into the trachea with fiberoptic visualization
- High first pass success rate with a proven track record in the emergency and difficult airway scenario
- Robustly designed to last for years
- Works in conjunction with many LMA’s
- Portable and reusable device that won’t strain your budget

Malleable stylet can be shaped to fit your patient’s difficult airway

Compatible with Clarus Turbo LED or most Greenline laryngoscope handles

SUPERIOR DESIGN, SUPERIOR ACCESS
The Clarus Levitan fiberoptic stylet is the ideal solution for emergency intubation. Optimum grade fiberoptics and a high-resolution eyepiece provide superior access and vision when you need it most. Fast, portable and cost-effective, the Levitan is the trusted choice for thousands of emergency doctors worldwide.

1. High resolution eyepiece for conclusive placements
2. Port for oxygen insufflation
3. Malleable stylet gives superior laryngeal access
4. Atraumatic tip protects sensitive airways and reduces trauma
5. Soakable stylet and light source allow for safe and efficient sterilization

- Designed by emergency physicians, for emergency physicians

- Stytle Length: 30cm
- Stytle Diameter: 5.01mm
- ET Tube Size Range: 5.5-9.0 cut @ 28cm
- O2 Port Insufflation: As Needed

Cleaning: The Levitan stylet and Turbo LED are fully submersible. Common cleaning procedures include Steris, Sterrad or Cidex (No Autoclave). See full Directions for Use for additional cleaning instructions.
